

CipherGrid
SECURITY

Company-profile.md

Our company is cipher grid security

We make fire wall protection

We have three employees

And we are a new company that started last year

We are located 1241 East Main St. Athens ,GA.

CipherGrid
SECURITY

Security policies

- Our policy is to secure servers and devices
- Our main focus is to block and prevent malware and backdoors as well as Dos attacks
- It dictates which users, devices, and protocols are allowed to communicate
- protecting the network from unauthorized access and malicious activity

CipherGrid
SECURITY

Incident response plan –plan.md

Our malware and backdoor protection: Prevents malicious code and unauthorized programs from secretly downloading or executing on your systems.

Our (Dos)Denial-of-service protection: Filters out overwhelming floods of malicious data packets designed to crash your network or server.

CipherGrid
SECURITY

Network-diagram.md

- We Block incoming threats.
- It blocks unsolicited or malicious data.
- prevents unauthorized outgoing connections.
- Live warnings of corrupted data threats.
- ai that classifies incidents and threat levels and responds accordingly.

We Block Incoming Threats.

INCOMING THREATS

Malicious Attacks

Unsolicited Data

Corrupted Data

Unauthorized Access

It **blocks** unsolicited or malicious data.

Prevents unauthorized outgoing connections.

LIVE WARNING
Corrupted data threat detected.

Live warnings of corrupted data threats.

AI that classifies incidents and threat levels and responds accordingly.

AI-POWERED THREAT RESPONSE

1. DETECT

AI monitors and detects anomalies and threats.

2. CLASSIFY

AI classifies incidents and determines threat level.

3. ASSESS

AI assesses risk and determines the appropriate response.

4. RESPOND

AI responds automatically to block, contain, or remediate the threat.

STRONGER SECURITY

REAL-TIME PROTECTION

SMARTER. SAFER. ALWAYS.

Role-based-access-controls.md

- Each of us have access to all coding and programs of the different levels of firewalls

CipherGrid
SECURITY

Risk management plan.md

- We remove the risk of online threats like
- Hackers
- Scammers
- And destructive malware

CipherGrid
SECURITY

Training-statigy.md

- We are well educated from schooling and cyber security programs

CipherGrid
SECURITY

How ai can support security explanation:

- AI supports cybersecurity by analyzing massive amounts of network activity in real-time to find threat, and malicious patterns faster than humans can. It automates repetitive security tasks like vulnerability scanning and incident response while learning from attack data to predict and prevent future threats. The key advantage is speed and scale, AI operates 24/7, processing security data at volumes impossible for human teams alone.
